

MiCA Regulatory Classification Self-Assessment

Pre-launch | Version 0.2 | 6 October 2026
Prepared by Lobby Cash Corporation

1. Purpose and scope

This document records the project's preliminary classification of \$LOBBY under Regulation (EU) 2023/1114 (MiCA). It concerns the base Solana token intended for launch through Pump.fun. Operational governance mechanics and related ecosystem arrangements are outside the detailed scope of this shortened assessment; their omission does not mean those arrangements have been cancelled or have no relevance to classification.

This is a project self-assessment, not a legal opinion, regulatory approval or MiCA white paper. It does not establish authorization to offer the token in any jurisdiction or complete any required regulatory notification.

2. Company particulars

Entity	Lobby Cash Corporation
Filing ID	2026-002096115
Jurisdiction / type	Wyoming, United States; domestic profit corporation; statutory close corporation
Initial filing	1 October 2026
Registry status	Active / Current; tax, registered-agent and other standing: Good, as recorded in the registry extract provided for this revision.
Principal / mailing address	30 N Gould St Ste N Sheridan, Wyoming 82801 USA
Website	lobby.cash

Wyoming Secretary of State: [company filing record](#)

3. Token particulars

Name / ticker	Lobby / \$LOBBY
Network / launch platform	Solana / Pump.fun
Token configuration	Standard Pump.fun token configuration; no bespoke base-token permission model specified.
Total supply	1,000,000,000 LOBBY under the standard Pump.fun launch configuration. [2]
Decimals	6 under the standard Pump.fun creation configuration. [3]
Mint address	To be disclosed at token generation.
Team holding	4% of total supply, equivalent to 40,000,000 LOBBY, intended to be acquired through a developer purchase (dev buy). This describes the intended holding; the purchase must achieve that amount.
Other allocations	No separate treasury or ecosystem allocation; no private sale.

4. Base-token rights

\$LOBBY does not represent equity in Lobby Cash Corporation, debt, a repayment obligation, a dividend entitlement, a share of revenue or profits, or a claim to company assets on liquidation. It has no issuer redemption right, reserve backing or entitlement to redeem for fiat currency or another asset.

The token has no peg, target value or undertaking to maintain a stable price, and no commitment to price appreciation or token buybacks. It is intended to be transferable and tradable through the platform's standard arrangements. The standard Pump.fun supply is fixed, with no further tokens minted. [2]

5. Classification analysis

Crypto-asset definition. A transferable digital token recorded on Solana falls within the general concept of a digital representation of value or rights transferred and stored using distributed ledger technology. The standard interchangeable units do not support reliance on the unique and non-fungible exclusion. [1]

Electronic money token (EMT). \$LOBBY does not purport to maintain a stable value by referencing a single official currency. On the stated base-token design, the defining EMT characteristic is absent. [1]

Asset-referenced token (ART). \$LOBBY does not purport to maintain a stable value by referencing another value, right or combination of these. On the stated base-token design, the defining ART characteristic is absent. [1]

5. Classification analysis (continued)

Scope exclusions. The base-token rights described here do not confer share, bond, deposit, insurance, pension or securitisation rights. However, the absence of those rights and the use of Pump.fun do not by themselves settle whether the complete token arrangements constitute a financial instrument. Article 2 exclusions must be assessed against the full rights and arrangements, including any functionality omitted from this shortened document. [1]

Working outcome. The described base token does not exhibit the defining stable-value characteristics of an ART or EMT. A classification as a crypto-asset other than an ART or EMT remains conditional on the complete arrangements falling outside the Article 2 exclusions. This document does not assign a definitive utility-token label. [1]

6. Geographic policy and risk

The project's intended geographic policy excludes UK consumers and persons or territories subject to applicable sanctions restrictions, including Iran and North Korea. These examples are not an exhaustive sanctions list. Availability elsewhere remains subject to applicable local requirements and platform restrictions; this document does not establish worldwide legal clearance.

The token may lose all market value. Liquidity may be limited, and team holdings or market activity may affect price. Blockchain, wallet and platform failures can cause loss. This is a summary of base-token risks.

7. Conclusion

The preliminary base-token assessment identifies no stable-value undertaking characteristic of an ART or EMT. The broader MiCA classification remains subject to a review of the full token rights and arrangements. Any material change to those rights requires the assessment to be updated.
